Reflecting on the Feynman Lecture

Review your response to the Feynman reading (perhaps even look over the Feynman reading again if it has been awhile!), and consider the following questions and record your responses in a google doc:

- How did you feel when reading the article?
- It is a hefty article. What tools did you use to help you read it? (notes, annotations, looking up words..etc)
- What words/concepts did you recognize (whether you know the definition or not)
- What words/concepts were new to you?
- What are the questions that you have? Either about the material or questions that the article made you think about.
